Ideal Wand Combination for NFP Users

For NFP users confirming ovulation through PdG levels, Mira recommends either using **MAX wands only** or a **combination of PLUS and MAX wands** for a cost-effective and reliable approach.

- **Option 1:** Use MAX wands exclusively.
- **Option 2:** Use PLUS wands during the follicular phase until the LH surge, then switch to MAX wands for 3–5 days to confirm ovulation. Continue with MAX if PdG results remain inconclusive.

Note: Avoid switching wand types or lots within the same cycle to maintain consistency in E3G measurements. Switching after ovulation is acceptable. More info in the document attached.
